Hector Pollitt specializes in the application of econometric techniques to large, disaggregated data sets to interpret historical experience, to simulate the impact of alternative policy options, and for forecasting. In the ferrous metals sector NACE

On balance, however, unit energy costs are expected to rise because of the high price of energy. This is the basis of a measure that is frequently used, the Lerner Index, where the difference between price and marginal cost as a proportion of price measures the relative monopoly price distortion, as illustrated for example in Schroeter and Wolfram. She has collaborated on a number of research projects with European institutions, and is a member of several European research networks.

We tested for the existence of individual group effects and time effects by an advantage of ETR over environmental regulations lies in the availability of tax revenues that can be used in ways that reduce the inclination to relocate. The standard Danish electricity tax, comprising an energy tax component and a CO2 tax component, is one of the highest electricity taxes in Europe.
